EDUCATION & PROGRAMS

CodePath - AI Engineering 301

Fall 2026

Georgia Institute of Technology - Atlanta, GA

Aug. 2026 - May 2028

M.S. Computer Science, Machine Learning Concentration

California State University, Sacramento - Sacramento, CA

Aug. 2023 - Dec. 2025

B.S. Computer Science

EXPERIENCE

AI Research Engineer | Medical AI Research

Aug. 2025 - Present

- **SpineFairBench** - co-authored a counterfactual VLM benchmark evaluating demographic sensitivity across 7,996 paired radiographs and a frozen 9-model panel.

[ResearchGate](#)

- Implemented the Python/PyTorch ingestion, evaluation, and reproducibility pipeline across 2 open-access repositories.

- **MedInsider** - co-authored an LLM-agent benchmark spanning 840 clinical scenarios (420 matched pairs), 5 regulatory failure families, and 8 incentive conditions.

[ResearchGate](#)

- Engineered deterministic simulated-EHR tooling, action logging, audit pipelines, and scoring across a 9-model evaluation panel.

Software Engineer | DHCS

May 2025 - Present

- Streamlined production monitoring, log processing, and reporting workflows, reducing manual operational work 40% and mean time to detection 50%.

- Reworked backend integration, validation, and alerting workflows, accelerating root-cause analysis 35% and reducing incident resolution time 30%.

- Improved real-time alerting accuracy 20% through automated log-processing and operational telemetry pipelines.

Software Engineering Intern, Machine Learning | District Hut

May 2024 - Jul. 2025

- Scaled distributed data pipelines processing 3 TB/week and hardened SQL validation checks, preventing 5 critical data-corruption incidents while automating 75% of validation tasks.

- Implemented metrics-triggered ML retraining with 3 engineers, eliminating 6 hours of manual work per week while maintaining 100% test coverage.

OPEN SOURCE CONTRIBUTIONS

NVIDIA CCCL | CUDA C++ / Python | [Merged PR #10790](#)

Aug. 2026

- Enhanced GDB and LLDB pretty-printers for CUDA C++ memory resources with state-aware inspection; expanded debugger coverage from 3 to 12 cases across heap, in-situ, empty/reset/moved-from, synchronous, and aliased states.

- Validated all 12 CMake debugger scenarios against expected GDB and LLDB output across optimized test harnesses.

Uber NullAway | Java | [Merged PR #1694](#)

Aug. 2026

- Modernized initialization-analysis tests by replacing deprecated `addSourceFile` APIs with inline `addSourceLines` fixtures; removed 4 obsolete testdata files while preserving regression coverage.

- Consolidated shared Java test source into a reusable helper and removed obsolete deprecation suppression from the test class.

PROJECTS

AI-Manar - Production iOS App | Flutter, Dart, iOS

2026 - Present

- Shipped a production iOS app to the Apple App Store, owning application architecture, UI implementation, testing, release engineering, and feature delivery.

- Integrated Google Places and location services, supported 9 languages, and established Xcode Cloud CI/CD for repeatable App Store releases.

APEX - Arrhythmia Pattern Explainer | Python, PyTorch, FastAPI | [GitHub](#)

Jul. 2026

- Created an ECG inference service for 71 diagnostic categories, reaching 0.920 macro-AUROC on PTB-XL with 6 ms prediction latency.

- Reduced Expected Calibration Error 97% (0.079 to 0.002) and spurious findings 93% (5.09 to 0.35 per record) while preserving AUROC.

SENTRY - VLM Incident Report Generator | Python, PyTorch, FastAPI | [GitHub](#)

Jun. 2026

- Created a LoRA-adapted vision-language reporting pipeline and production FastAPI service with Docker, API-key authentication, rate limiting, GitHub Actions CI/CD, and 143 passing tests.

- Evaluated 10,000 manually reviewed outputs and reduced ungrounded claims 35% through hallucination measurement and reliability-focused iteration.

S.A.I.N.T. - Network Intrusion Detection System | Python, Flask, Redis | [GitHub](#)

Mar. 2026

- Created a network intrusion-detection service with 2 engineers, reaching 89% accuracy on 125K+ NSL-KDD samples and serving 50-100 network connections/sec.

- Delivered an interactive analyst dashboard with Flask, Redis, and Plotly for low-latency monitoring and investigation.

TECHNICAL SKILLS

Languages: Python, Java, C, C++, SQL, JavaScript, Dart, Swift, MATLAB, R

Backend & APIs: FastAPI, Flask, Spring Boot, Node.js, Redis, REST APIs, Model Serving

Frontend & Mobile: React.js, Flutter, iOS, Xcode Cloud

Cloud & DevOps: AWS, GCP, Docker, Git, GitHub Actions, CI/CD, Gradle, Unit Testing

Data & ML: PyTorch, TensorFlow, scikit-learn, pandas, NumPy, Hugging Face Transformers, PEFT, LoRA

AI & Agents: VLMs, LLM Agents, RAG, LangChain, CrewAI, Model Evaluation
